

MyCourses Redesign

New Media Design: GUI

Zach Burdett

RIT myCourses Website

RIT's myCourses website is the learning management system that all students and professors use throughout their years in college.

Unfortunately, when it comes to user experience, myCourses falls flat.

The purpose of my redesign is to redevelop the way students interact with their courses to better manage the various tasks they need to accomplish.

User Story

"As a student worried about an upcoming project, I want to be able to quickly pull up myCourses on the go and see how different project grades might affect my overall grade in the class."
